

**DIRECTIONS FOR OBTAINING TOPOGRAPHIC MAP, LATITUDE AND LONGITUDE,
AND NAME OF USGS TOPOGRAPHIC QUADRANGLE
FROM TOPOZONE.COM**

1. Under search mode, enter topozone.com
2. Click on Topozone - the Web's topographic map and more.
3. Under left-hand column, enter information under Place Name Search.
4. Click on Search.
5. Under the brown Place-County-State-Type (etc.) tool bar, click on the name of your city under the Place link. That will bring up the map.
6. Under left-hand column, make sure the information reads as follows:

Map Size: Large

View Scale: 1:50,000

Coordinate Format: D/M/S

Coordinate Datum: WGS84/NAD83
7. Then click on:

Update Map
8. Then locate your facility on the map. If it is not in the view provided, click on the arrow at the map border. That will expand the map in the direction that you wish to go.
9. Once you have determined your facility location, left click on it. That will make your facility location the center of the map. It will also mark it with an "x".
10. Note the brown tool bar above the map. Under it note the latitude in degrees, minutes, and seconds N, and longitude in degrees, minutes, and seconds W. For example, 35° 23' 05" N; 84° 46' 13" W. If you don't see your latitude and longitude stated in similar fashion, you have not changed the Coordinate Format (See #6 above). Without doing anything to your map location, change Coordinate Format to D/M/S.
11. Then in the left-hand column, click on

Print this map.

The map will contain your facility location marked by an X (or something similar to an x), latitude, longitude, and name of the quadrangle.

If you have any questions, call Pat Keefe at (502) 564-3410.
